ABSTRACT

G00002

A cover (4) for a desiccant dispenser (1) is mounted over an opening (3) of a bucket-shaped container (2) containing a plurality of desiccant bags. The cover (4) includes a hard main plate (8) having a taking-out bore (7) for insertion of a hand to take out the desiccant bags, and one elastic plate (10) mounted on the main plate (8) to cover the taking-out bore (7) and having a plurality of cuts (9) arranged radiately to permit the insertion and withdrawal of the hand. This can greatly extend the duration of the activity of desiccant bags placed in the container of a dispenser, particularly desiccant bags located in an uppermost layer.
