

CHAIR-TYPE MASSAGER

ABSTRACT

A chair-type massager (1), which includes an arrangement capable of pressing treatment areas with increased pressing force and stretching the treatment areas in a grasped state, can relieve stiffness in the treatment areas, including the shoulder, without causing user discomfort.

The chair-type massager (1) comprises a seat (2) on which a user (U) sits, a backrest (3) provided at the rear portion of the seat (2), a back massage mechanism (5), mounted to the backrest (3), for performing grasping-kneading massage on the treatment areas of the user (U), a pressing massage mechanism to give pressing massage to the user (U), and a control unit to perform grasping-kneading massage operation by the back massage mechanism (5) and pressing operation by the pressing massage mechanism in a cooperative manner.
