

ABSTRACT

There is provided a process for the production of a silicone rubber molded article to which a design is strongly attached.

- 5 A transfer material or a cover film which is used in the process contains a layer which contacts an uncured silicone rubber composition in the mold upon molding and which contains a polyorganohydrogensiloxane having at least two hydrogen atoms which bond to a silicone atom or an alkoxy silane having an unsaturated bond such as triethoxyvinylsilane as a
- 10 bond accelerating component.
