

Abstract

The present invention discloses a padlock comprising a lock body provided with a lock beam hole; a lock beam for inserting into the lock beam hole; a fastener capable of passing through a lock nose on the door and extending into one lock beam hole to connect the lock beam hole with the lock nose, the fastener is provided with a through passage for the lock beam to pass through. The present invention connects the lock beam hole with the lock nose by the fastener, so that the padlock is fixed on the door to prevent the padlock from dropping or being lost, thereby facilitating the use of the user.
