

ABSTRACT**ELECTROMAGNETIC CONTACTOR**

Provided is an electromagnetic contractor having reduced dimensions. In the electromagnetic contactor, a power supply conductor is arranged to orthogonally intersect with the longitudinal direction of a fuse. Thus, the dimension in the depth direction of the electromagnetic contactor is reduced, and the height dimension of the electromagnetic contactor is reduced by the amount that the longitudinal direction of a switch is arranged in the same direction as the longitudinal direction of the fuse.
