

Process and device for recycling and decontaminating pockets
such as disposable gloves for clean rooms

ABSTRACT OF THE DISCLOSURE

5 A washer (2), disposed downstream of a sorting station (1), has an
exit door (8) opening inside a sealed enclosure (9) the air of which is
conditioned and in which pockets (2) are displaced in the direction of a dryer
(10). A packaging station (13), downstream of the dryer, is also placed in the
sealed enclosure. Particulate contamination created by the ambient air is
10 thus limited.

Application to the treatment of disposable gloves for clean rooms.
