
Cleaning device and method for cleaning articles to be cleaned

5

Abstract

The invention proposes a cleaning device (110) for cleaning washware (130). The cleaning device (110) comprises at least one cleaning chamber (114) with at least one application device (148) for applying at least one cleaning liquid (150) to the washware (130) in the
10 cleaning chamber (114). The cleaning device (110) furthermore comprises at least one transportation device (136) for transporting the washware (130) through the cleaning chamber (114) in a transportation direction (138). The cleaning device (110) furthermore has at least one outlet region (142), which is arranged downstream of the cleaning chamber (114) in the transportation direction (138), for removing the washware (130) from the
15 transportation device (136). The cleaning device (110) furthermore has at least one sensor (168) for identifying at least one prespecified type of washware (130). The cleaning device (110) furthermore has at least one slide (170) and is designed to automatically push the washware (130) of the prespecified type from the transportation device (136) transversely to the transportation direction (138).
