CLAIMS

1. An oxidizing agent-containing composition that is dispensed in a form of a foam agent from an aerosol container and mixed with an alkali agent-containing agent to be used as a hair dye or a hair bleaching/decoloring agent,

the oxidizing agent-containing composition comprising: a hydrocarbon (A) that does not have a branched chain; and an oxidizing agent (B), and substantially free of an amphoteric surfactant.

2. The oxidizing agent-containing composition according to claim 1, wherein the hydrocarbon (A) is liquid paraffin.

3. The oxidizing agent-containing composition according to claim 1, further comprising a polyhydric alcohol (C).

4. The oxidizing agent-containing composition according to claim 2, further comprising a polyhydric alcohol (C).

5. A method for using the oxidizing agent-containing composition according to any one of claims 1 to 4, comprising

a step of dispensing the oxidizing agent-containing composition from an aerosol container in the form of a foam agent, and

a step of mixing the foam agent with a foam agent containing an alkali agent to prepare a hair dye or a hair bleaching/decoloring agent.
