

ABSTRACT

INFORMATION PROCESSING APPARATUS, INFORMATION PROCESSING METHOD, AND INFORMATION PROCESSING PROGRAM

Providing configurations that enable suitable implementation of mutual support among users.

An information processing apparatus includes a control unit configured to execute: acquiring first information from each of the users belonging to a collaborative organization in which the users engaged in businesses in different fields are organized; providing the first information to a network in a browsable manner so that each of the users belonging to the collaborative organization can mutually share information; acquiring, for each of the users belonging to the collaborative organization, an amount of profit obtained from the business by the user; summing up profit return amounts for respective users, each of the profit return amounts being obtained by multiplying the amount of profit by a first rate; and calculating, for each of the users belonging to the collaborative organization, contribution cost to be obtained by multiplying the summed profit return amount by a second rate, the contribution cost being a cost to be distributed to the user.
