

ABSTRACT

The present invention relates to an encapsulant film composition including an ethylene/alpha-olefin copolymer, an encapsulant film, and a solar cell module.

5 When an encapsulant film is produced using the encapsulant film composition according to the present invention, the immersing time of an ethylene/alpha-olefin copolymer is reduced so that the economic viability of a process of producing an encapsulant film can be improved. In
10 addition, the encapsulant film composition produced by using the present invention exhibits excellent crosslinking degree.
