

ABSTRACT

A base station includes a base station body, a mop member cleaning device disposed on the base station body and a scraping and blocking member. The mop member cleaning device is configured to clean a mop member of the cleaning robot, the scraping and blocking member is configured to prevent cleaning fluid from splashing during the process of the mop member cleaning device cleaning the mop member, thereby improving the cleaning effect. Furthermore, the cleaning robot system is capable of automatically cleaning the mop member with no need for users to change or clean the mop member frequently, which is helpful to free consumers from house cleaning, thus relieving the burden on the consumers, and also helpful to clean the mop member in time so as to ensure a better effect in next cleaning.
