

## ABSTRACT

A production method for a granular composition in which the dissolution property of 2-{4-[N-(5,6-diphenylpyradin-2-yl)-N-isopropylamino]butyloxy}-N-(methylsulfonyl)acetamide is improved is provided.

The production method for a granular composition includes a step of compression molding a mixture obtained by mixing 2-{4-[N-(5,6-diphenylpyradin-2-yl)-N-isopropylamino]butyloxy}-N-(methylsulfonyl)acetamide and at least one or more excipients selected from the group consisting of a sugar alcohol, a starch, and a saccharide, thereby obtaining a compression molded material.
