(54) Title: COMMUNICATION DYNAMICS METADATA TAGGING FOR TRANSCRIPTION

(57) Abstract: Communications system used for trading communications that interfaces with a transcription system to enable a service of transcribing trader communications. During an audio call, a stream of audio signals transmitted by a communications device via a user-selected communications line are received together with metadata from the communications device. The audio signals and metadata can be provided during the audio call and via an API gateway to a transcription system in one or more data formats that enable the transcription system to transcribe the stream of audio signals into text and tag the text with the metadata.
