

IMAGE PRINT FEEDING APPARATUS AND EDIT PROCESSING METHOD AND BACKGROUND PROCESSING METHOD

[Designation of document] Abstract

[Abstract]

[Purpose] To provide an image print feeding apparatus which can prepare image data with realistic sensation and virtual reality, and to provide image data that a plurality of users can enjoy and in which write-in is easily carried out.

[Structure] It has a light source information memory part which stores light source information relating to combination variation and light intensity of lights which are turned on among the plurality of lights, an exposure information memory part which stores appropriate exposure information (of a camera on the occasion of shoot) with respect to each light source information stored in the light source information memory unit, a light intensity adjusting unit which can adjust light intensity of lights which were turned on based upon the light source information, and an exposure correcting unit which can correct exposure based upon the exposure information.
