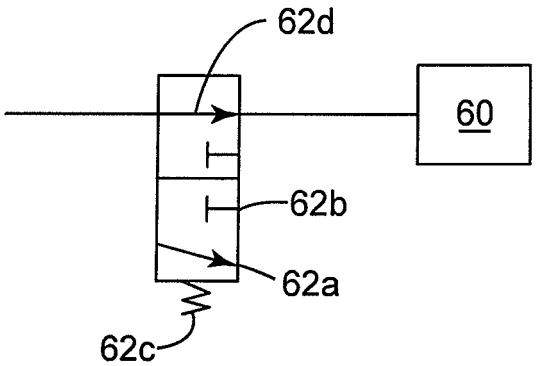

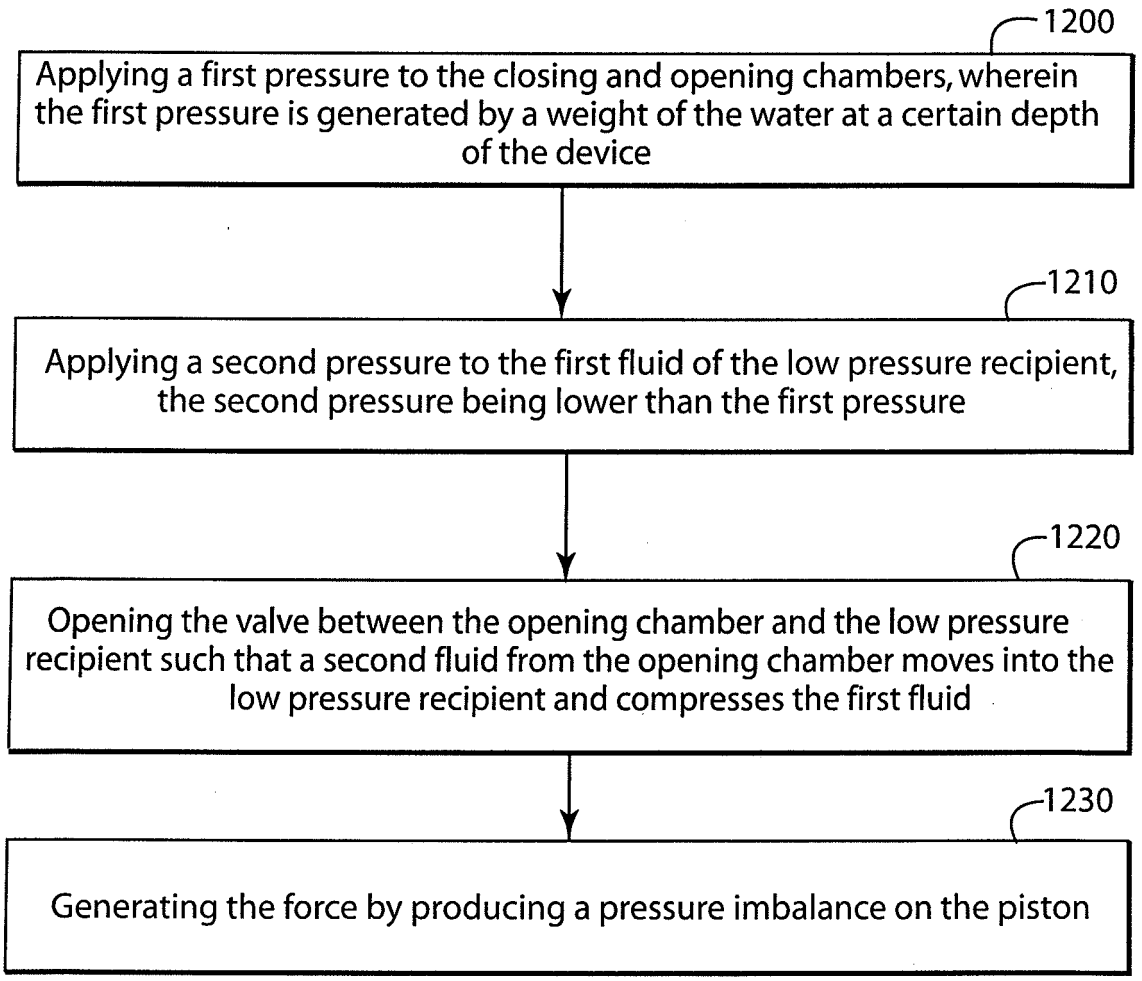

FIG. 11

1200
Applying a first pressure to the closing and opening chambers, wherein the first pressure is generated by a weight of the water at a certain depth of the device
1210
Applying a second pressure to the first fluid of the low pressure recipient, the second pressure being lower than the first pressure
1220
Opening the valve between the opening chamber and the low pressure recipient such that a second fluid from the opening chamber moves into the low pressure recipient and compresses the first fluid
1230
Generating the force by producing a pressure imbalance on the piston
