ning of each regular issue of the PCT Gazette.*

(54) Title: DE-ACTIVATION AT LEAST IN PART, OF RECEIVER IN RESPONSE, AT LEAST IN PART TO DETERMINATION
THAT AN IDLE CONDITION EXISTS

(57) Abstract: In one embodiment, a method is provided. In the method of this embodiment, in response, at least in part, to a
determination that an idle condition exists, one or more packets may be transmitted to indicate, at least in part, that a transmitter
is desired to refrain from transmitting, during one or more predetermined time intervals, to a receiver. Also in the method of this
embodiment, also in response, at least in part, to the determination that the idle condition exists, the receiver may be de-activated,
at least in part, during the one or more predetermined time intervals. Of course, many alternatives, variations, and modifications are
possible without departing from this embodiment.
