

Abstract

Batching Machine

A batching machine (1000), comprising material barrels (100), discharge heads (200), and pumps (300). The material barrels (100) are configured to load materials, and the number of the material barrels (100) is more than one; the discharge heads (200) and the material barrels (100) are independently arranged; the number of the pumps (300) is more than one, and the pumps (300) and the material barrels (100) are arranged in one-to-one correspondence; the pumps (300) are configured to extract the materials in the material barrels (100) and convey the materials to the discharge heads (200), so that the materials are output from the discharge heads (200).
