

## ABSTRACT

Agents for preventing the adhesion of aquatic organisms which contain as the active ingredient isocyanuric acid compounds of formula (1)

(1)

wherein  $R_1$ ,  $R_2$  and  $R_3$  each independently represent a hydrogen atom or a straight chain or branched alkyl group having 1 to 8 carbon atoms. These agents are employed in the form of antifouling coatings for, e.g., ship bottoms and watercourses, solutions, or emulsions for fishing nets.
