

A FACE MASK

Abstract

Described herein is a face mask comprising a mask body adapted to fit over a nose and mouth of a wearer. The mask body comprising defining at least one first aperture and a first mating structure circumscribing the at least one first aperture, and a lid movably coupled to the tray and defining at least one second aperture and a second mating structure circumscribing the at least one second aperture. An air permeable article is receivable between the lid and the tray, the first mating structure and the second mating structure sandwiching and forming a substantially air tight seal with the air permeable article when in the closed position.
