

FOOD PROCESSING TABLE APPARATUS

ABSTRACT

The present invention intends to provide a food processing table apparatus (1) which prevents food from deteriorating during processing improves the work environment, and enables kitchen knives (24) to be easily sterilized. The food processing table apparatus (1) comprises: a main body (3) constructed of adiabatic walls (2); a cooling device (4) positioned in the main body (3); cutting boards (5) and an upper surface board (15) which are detachably attached onto the upper surface of the main body (3); cold air supplying means (8,9) for supplying cold air from the cooling device (14) onto the surface of the cutting boards (5); sucking means (11) for sucking the cold air from the periphery of the cutting boards (5) into the main body (3); kitchen knife holding ports (25) formed on the upper surface (15) into which the kitchen knives (24) are inserted; and germicidal lamps (43) which are positioned in the main body (3) and irradiate light upon the kitchen knives (24) inserted through the kitchen knife holding ports (25).
