(54) Title: SYSTEMS AND METHODS FOR DETERMINING THE PROBABILITY OF A PREGNANCY AT A SELECTED POINT IN TIME

Figure 1

(57) Abstract: The present invention generally relates to systems and methods for determining the probability of a pregnancy at a selected point in time. Systems and methods of the invention employ an algorithm that has been trained on a reference set of data from a plurality of women for whom at least one of fertility-associated phenotypic traits, fertility-associated medical interventions, or pregnancy outcomes are known, in which the algorithm accounts for any woman who ceases pregnancy attempts prior to reaching a live birth outcome.
