(54) Title: SEARCHING EMAIL ADRESS BY NUMERICAL CODES

(57) Abstract: An email address searching method (figure 3) includes the steps of providing an information database (40), wherein a plurality of email addresses stored in the information database (40) are respectively assigned with specific numerical phone codes each of which is a combination of predetermined phone numbers of a register of said respective email address; receiving a search request from an email sender (S) by inputting a combination of phone numbers as a search code for an email to be sent by the email sender (S); and matching the search code with the phone codes (40) to search for a respective phone code that matches identically with the search code so as to search out the corresponding email address assigned with the respective phone code efficiently and promptly.
