(54) Title: METHODS OF TREATING CANCER

(I)

(57) Abstract: Described herein are methods for inhibiting a solid tumor expressing claudin-6 in a human subject, comprising administering to the human subject an effective amount of a composition comprising conjugates of a CLDN6-specific antigen-binding protein covalently bound to heterologous moieties comprising structural formula (I) wherein a first plurality of the conjugates are bound to four heterologous moieties comprising structural formula (I); at least about 95% of the first plurality of conjugates are structurally homogenous; and the effective amount is in a range of about 1.0 mg of conjugate/kg weight of the subject to 10 mg of conjugate/kg weight of the subject.
