

ABSTRACT

A method and device for selecting virtual characters, a terminal and a storage medium, which belong to the technical field of computers and the Internet. The method comprises: displaying a character selection interface of a competitive game (301); displaying, in the character selection interface, the remaining duration of a character selection stage (302); and when the remaining duration satisfies a first condition and a first user does not select a virtual character, displaying, in the character selection interface, character information of a first virtual character selected by a system for the first user (303). In the present application, when the first user does not select a virtual character, the character selection interface can also display the character information of the first virtual character, which facilitates other users reasonably arranging, according to the character information of the first virtual character, the lineup of a competitive game, increasing the rationality and reliability of other users for virtual character selection, and increasing the user experience of competitive games.
