

TITLE:
DISPLAY APPARATUS

ABSTRACT

5 A display apparatus including pixel structures is provided. Each of the pixel
structures includes pad groups, light-emitting elements, a first metal element and a second
metal element. Each of the pad groups includes a pad. The light-emitting elements are
respectively bonded to the pad groups. The first metal element and the second metal
element are disposed outside the pad groups and staggered with each other. A line width
10 of the first metal element is greater than a line width of the second metal element. The
first metal element extends in a first direction, and a long side of the pad intersects with the
first direction.
