

ABSTRACT

MILK-COMPONENT-CONTAINING COFFEE BEVERAGE

5           An object of the present invention is to provide a coffee beverage containing a milk component in which the precipitation generated by heat sterilization and/or upon storage of a coffee beverage containing a milk component is significantly inhibited by a simple method.

10           The object can be attained by incorporating three components: an organic acid, an organic acid salt, and an organic-acid ester of monoglyceride, in a coffee beverage containing a milk component.
