(54) Title: SYSTEM AND METHOD OF PRESENTING CHANNELIZED DATA

(57) Abstract: A system and method for presenting data from a plurality of sources to a user. The system includes a plurality of information sources, a user interface, content storage and a server connected to the user interface and the content storage. The user interface selects data from one or more of the plurality of information sources to be indentifed as published content and issues content requests to access data identified as published content. The content storage stores published content and the server manages the content requests received from the user interface. The server includes a repository and a content directory, wherein the repository manages a virtual directory structure associated with published content, wherein the content directory maintains a content directory structure pointing to all published content stored in the content storage and wherein the content directory structure is referenced by the virtual directory structure in the repository.
