(54) Title: METHOD AND SYSTEM FOR MULTICASTING CALL NOTIFICATIONS**(57) Abstract**

A method for communication over a network (110), which can be both analog and digital includes simultaneously transmitting a call notification to a plurality of communication devices. These communication devices include devices such as telephones (120a, 120b), pagers, computers (134a, 134b), and voice mail systems. The addresses (e.g., telephone numbers) are stored in a database (138) which is queried based on the call notification. For example, this method can be used in a find-me/follow-me system or to initiate a conference call.
