ABSTRACT

SHOWERHEAD

The purpose of the present invention is to provide a simply-configured showerhead at a low price, wherein the shower water is stopped simultaneously with the operation of the stop cock of the shower, sparing the user an unnecessary action of reattempting to turn off the stop cock.

A showerhead 10 comprising: a body 11 having a large channel 11a and small channel 11b defined by a step 11d and communicated with each other; and a nozzle 12 for spouting water supplied through a hose 20 connected to the large channel 11a, wherein: a partition tube 13 having a water-inflow chamber 13a therein is inserted in the large channel 11a to form an air-inflow chamber 14 between the partition tube 13 and the body 11, and air is introduced from an outer air-suction port 11c into the water-inflow chamber 13a through an inner air-suction port 13c; and a joint 13d of the partition tube 13 is fixed by a fixing member 16 inserted in a fixing-member-receiving hole 11e formed in the body 11.
