- S101 Acquire speed ramp information of a speed ramped video, wherein the speed ramp information is used for representing the ramp of the playback speed of the speed ramped video
- S102 According to the speed ramp information, perform speed ramp inversion processing on the speed ramped video to obtain a non-speed-ramped video
- S103 Display the non-speed-ramped video, and synchronously perform video capturing to generate a non-speed-ramped target video
- S104 Perform speed ramp processing on the non-speed-ramped target video according to the speed ramp information, so as to obtain a speed ramped target video

(57) Abstract: Provided are a video recording method and device, an electronic device and a storage medium. Said method comprises: acquiring speed ramp information of a speed ramped video, the speed ramped information being used for representing the ramp in the playback speed of the speed ramped video (S101); according to the speed ramp information, performing speed ramp inversion processing on the speed ramped video, to obtain a non-speed-ramped video (S102); displaying the non-speed-ramped video, and synchronously performing video capturing to generate a non-speed-ramped target video (S103); performing speed ramp processing on the non-speed-ramped target video according to the speed ramp information, so as to obtain a speed ramped target video (S104). As the playback speed of the non-speed-ramped video which has been subjected to speed ramp inversion is the same as the normal speed of a video recorded by a user, by displaying the non-speed-ramped video to the user and guiding the user to perform video recording, the special effect in a template can match the video content captured by the user, enabling the video recorded by the user to directly obtain the special effect in the original speed ramped video, so as to solve the problem that the video special effect does not match the video content, improving the special effect performance of the video recorded by the user.

(57) 摘要: 提供一种视频录制方法、设备、电子设备及存储介质, 通过获取变速视频的变速信息, 其中, 变速信息用于表征变速视频的播放速度变化 (S101); 根据变速信息, 对变速视频进行逆变速处理, 得到原速视频 (S102); 展示原速视频, 并同步进行视频拍摄, 生成原速目标视频 (S103); 根据变速信息对原速目标视频进行变速处理, 得到变速目标视频 (S104); 由于经过逆变速的原速视频的播放速度与用户录制视频的正常速度相同, 通过向用户展示原速视频, 引导用户进行视频录制, 能够使模板中的特效与用户拍摄的视频内容相匹配, 使用户录制的视频能够直接获得原变速视频中的特效, 解决视频特效与视频内容不匹配的问题, 提高用户录制视频的特效表现。
