

ABSTRACT

A terminal device is configured to instruct an RRC to release a PUCCH for all serving cells, in a case, in which a condition is satisfied that includes at least a condition that the terminal device has a valid PUCCH resource for an SR
5 configured, in the primary cell, for the certain TTI, when a value of the counter is equal to the prescribed value or larger than the prescribed value, and configured to instruct an RRC to release a PUCCH for a serving cell other than the primary cell, in a case, in which a condition is satisfied that includes at least a condition that the terminal device has a valid PUCCH resource for an SR configured, in the serving
10 cell other than the primary cell, for the certain TTI, when the value of the counter is equal to the prescribed value or larger than the prescribed value.
