

ABSTRACT**WEIGHT-HANGING HOOK**

A weight-hanging hook includes a hook body (2), a
pivotal safety retainer (31) biased to a close position
to close an opening (211) in the hook body (2), a locking
5 member (41) disposed movably within a slot (22) in the hook
body (2) and movable between a first position whereat the
locking member (41) engages the safety retainer (31) so
as to lock the safety retainer (31) in the close position,
10 and a second position whereat the locking member (41) is
removed from the safety retainer (31). An operating member
(42) is biased to a non-driving position whereat the locking
member (41) is disposed in the first position. The
operating member (42) is operable to move the locking member
15 (41) to the second position so as to allow the safety
retainer (31) to be operated to separate from the hook
portion (212).
