

## **MESSAGE APPARATUS**

### ABSTRACT

There is provided a massage apparatus capable of massaging a to-  
5 be-treated region ranging from the side of the waist to the side of the  
buttocks of a user effectively. The U-shaped massage apparatus 1  
comprises the main body 1 having the built-in driving section 2, and a  
pair of extended portions 4 formed so as to extend in leg form from both  
ends of the main body 3. The paired extended portions 4 are moved  
10 close to and away from each other in the widthwise direction under a  
driving force exerted by the driving section 2, for giving sandwich-style  
holding massage to a treatment target region located between the paired  
extended portions 4.
