

# **METHOD FOR INVOKING LOCAL KEYBOARD ON HTML PAGE IN USER TERMINAL DEVICE AND APPARATUS THEREOF**

## **Abstract**

The present invention relates to the field of communications, and discloses a method and an apparatus for invoking a local keyboard on an HTML page in a user terminal device. The method for invoking a local keyboard in the present invention includes the following steps: analyzing an HTML page when a user terminal device loads the HTML page, and generating a local input field at each page input field having a recognition identifier if page input field(s) having recognition identifier(s) and needing to invoke local keyboard(s) exist(s), wherein a local input field covers a respective page input field at a same location; setting a type of a local keyboard that needs to be invoked by each local input field; and transmitting input information received by the local input field through a corresponding local keyboard to the HTML page. By generating a local input field at a page input field having a recognition identifier, the present invention can implement an invocation of a local keyboard that cannot be invoked by a page input field through the local input field.
