

【ABSTRACT】

HEALTH GRADE EVALUATION SYSTEM AND METHOD FOR PREDICTING
OCCURRENCE PROBABILITY OF HEALTH ACCIDENT

5

A health grade evaluation system capable of presenting
objective metrics for an individual's health level is
disclosed. To this end, the present invention disclosure
provides a health grade evaluation system comprising a user
10 terminal, an institution server and an operation server which
is connected to the user terminal and the institution server,
collects personal medical information. According to the
present invention, it is possible to predict the risk of
health accidents in the near future by analyzing individual
15 medical information, so it is possible to induce lifestyle
improvement and raise social health promotion awareness.
