

ACADEMY FOR THE KNOWLEDGE MANAGEMENT SYSTEM

ABSTRACT

Embodiments of the present invention provide a method, system, computer program product, or a combination of the foregoing for creating a knowledge management system including an academy system for training and tracking training results of employees in a standardized and centralized location across the channels and sub-channels in an organization. The academy system stores a plurality of training modules, associated with one or more certification programs. The academy system further provides a user training selection interface configured to provide for user selection of one or more of the plurality of training modules. The academy system further provides the user access to the selected training module through an interactive display module interface. The academy system further provides for a user training results interface configured to provide a display of the user training results and stores the user training results of the selected training module in a user training database.
