(54) Title: BINDING DOMAIN

(57) Abstract: The present invention provides a variant antigen-binding domain which comprises at least one mutation in the VH domain compared to a reference antibody and which displays an increased affinity for TRBC2 over the reference antibody. It further provides an antibody, a chimeric antigen receptor (CAR), and a bispecific T-cell engager (BiTE), a cell which comprises said CAR, and a conjugate comprising said variant antigen-binding domain or said antibody. Additionally, it provides medical uses, diagnostic methods and methods of personalised medicine that exploit the products of the invention.
