(54) Title: METHOD AND DEVICE FOR DISPLAYING INFORMATION

(54) 发明名称: 用于显示信息的方法和装置

200

- 201 In response to the detection of a first preset operation performed by a first user on the page of a second user, sending operation prompt information to a terminal device used by the first user
- 202 In response to the detection of a second preset operation completed by the first user, adding a user label for the first user; generating an initial associated value indicating the association degree between the first user and the second user, and displaying the initial associated value on the page

(57) Abstract: The embodiment of the present disclosure discloses a method and device for displaying information. A specific mode of execution for the method comprises the following steps: in response to the detection of a first preset operation performed by a first user on the page of a second user, sending operation prompt information to a terminal device used by the first user, the page of the second user being used for exhibiting contents shared by the second user, the first preset operation being used for requesting to add a user label corresponding to the second user for the first user, and the operation prompt information being used for prompting the

first user to perform a second preset operation; in response to the detection of the second preset operation completed by the first user, adding the user label for the first user; generating an initial associated value used for indicating the association degree between the first user and the second user, and displaying the initial associated value on the page. The mode of execution realizes the provision of an operation portal for another user on the page of a user to establish an association relationship between the two users, and quantifies the association degree between the two users after establishing the association relationship.

(57) 摘要: 本公开的实施例公开了用于显示信息的方法和装置。该方法的一具体实施方式包括: 响应于检测到第一用户在第二用户的页面上执行第一预设操作, 向第一用户使用的终端设备发送操作提示信息, 第二用户的页面用于展示第二用户分享的内容, 第一预设操作用于请求为第一用户添加与第二用户对应的用户标签, 操作提示信息用于提示第一用户执行第二预设操作; 响应于检测到第一用户完成第二预设操作, 为第一用户添加用户标签; 生成用于表示第一用户与第二用户的关联程度的初始关联值, 以及在页面上显示初始关联值。该实施方式实现了在一用户的页面上为其它用户提供与该用户建立关联关系的操作入口, 并在建立关联关系之后, 对用户之间的关联程度进行量化表示。
