An Anti-aging Composition and Its Preparation Method and Skin Care Application

Abstract

The invention discloses an anti-aging composition and its preparation method and skin care application in the field of daily chemicals. The invention of anti-aging composition is composed of anti-wrinkle composition, Soy lecithin, Glycerin, Caprylic/Capric triglyceride, Propylene glycol, and Polysorbate 80, which is prepared by high-speed dispersion processes such as high-speed shear and high-pressure homogenization. The invention of anti-aging composition has good stability and transdermal absorption, with the efficacy of anti-aging and skin tightening.
