

ABSTRACT OF THE DISCLOSUREWHEEL

5 A wheel comprising (i) an axle secured to a
movable body, (ii) a rotator journaled on the axle so as
to be freely rotatable and having at least three apexes
disposed rotationally symmetrically around the axle, and
(iii) rollers, each roller being mounted on one of the
10 apexes of the rotator so as to be freely rotatable. Each
side between apexes of the rotator is provided with a
guiding surface which has small frictional resistance and
is slidable.
