

[ABSTRACT]

CONTROL DEVICE AND ELECTRIC FURNITURE

5 According to an embodiment, a control device includes multiple operation buttons, an acceptance part, and a displayer. The multiple operation buttons can control an operation of a movable part of electric furniture. In a first state in which the acceptance part receives a first input, the displayer displays a
10 first display between the multiple operation buttons. A bed system is provided in which the ease of use can be improved. A control device and electric furniture are provided in which the operationability can be improved.
