

Abstract

This polymer compound is represented by formula (1) (in the formula, R_1 and R_2 each independently represent a hydrogen atom or a methyl group. m and n are average numbers of repeating units, and each independently represent a real number within the range of 1 to 2000). The polymer compound has sufficient flexibility to be able to form a film, exhibits high adhesion to a low roughness copper foil, and has a low dielectric constant and dielectric loss tangent.
