## Descriptive Abstract

"Method for loading flight schedule changes"

AMADEUS (s.a.s)

The present invention relates to a method for loading flight scheduling changes in a computerized air transport reservation system, in which:

- the flight schedule database is updated;
- the reservations in question are reassigned by flight scheduling changes for updating the reservation inventory database.

This method of loading flight scheduling changes comprises the following steps:

- reception of at least one group of changes containing flight scheduling change data,
- extraction of the individual changes contained in the group and storing in a register as records for future schedule
- simulation of reassignment of the reservations in question by scheduling changes, by access of the reservations distribution server both to the records and to the flight schedule database,
- final updating of the flight schedule and reservations inventory databases.

Application to the updating of databases during changes of flight schedules in computerized reservation systems.
