Table 1. AFA-W blocks binding of TQ1 MoAb to L-selectin on human leukocytes.

	Lymphocytes			Neutrophils
	Unfixed cells	0.02% sodium azide	1% formalin	1% formalin
Mean fluorescence				
Unstained cells	1	1	1	2
TQ1 staining	244	366	149	156
TQ1 staining after AFA-W pre-treatment	98	216	82	61
t-test	<0.003	<0.002	<0.005	<0.001
Median fluorescence				
Unstained cells	1	1	1	1
TQ1 staining	221	374	134	138
TQ1 staining after AFA-W pre-treatment	44	208	64	26
t-test	<0.002	<0.001	<0.02	<0.001

All staining was performed in triplicate. Values given for stained cells are based on averages from 3 samples.
