

VEHICLE CONTROL METHOD, VEHICLE CONTROL SYSTEM, AND VEHICLE

ABSTRACT

A vehicle control method for controlling a vehicle including executing a front wheel and a rear wheel including: front wheel-only steering operation control for turning the front wheel without turning the rear wheel in response to a steering instruction from a driving entity; executing rear wheel-only steering operation control for turning the rear wheel without turning the front wheel in response to the steering instruction from the driving entity; and executing a specified control execution process for executing one type of steering operation control specified by the driving entity among a plurality of types of steering operation control including at least the front wheel-only steering operation control and the rear wheel-only steering operation control.
