(54) **Title:** MONITORING WAKE-UP SIGNAL USING COMMON IDENTIFIER

(57) **Abstract:** Methods, systems, and devices for wireless communi-
cations are described. According to one or more aspects, a user equip-
ment (UE) may receive a configuration message from a base station.
The configuration message may configure the UE based on one or
more identifiers associated with a group of UEs. The UE may deter-
mine at least one identifier based on receiving the configuration mes-
sage, and may monitor a signal based on the at least one identifier.
In some cases, the signal may indicate whether the UE should skip
an upcoming duration associated with a discontinuous reception. The
UE may then communicate with the base station, based on monitor-
ing the signal.
