

ABSTRACT**DEVICE FOR LOCKING AND UNLOCKING, WITH A KEY, A STOPPER
ON A FRAME**

The present invention concerns a device for locking and unlocking,
5 with a key, a stopper on a frame.

The device is characterized in that the rotor of the lock comprises a
cylindrical barrel (17) mounted with rotation in the stopper (1) and being
interdependent in rotation with the slide bolt (1) and a cylindrical axle (18)
with head (21) mounted loosely in the barrel (17).

10 The invention is used in the area of road works.
