(54) Title: TRANSACTION INFORMATION PROCESSING METHOD AND APPARATUS

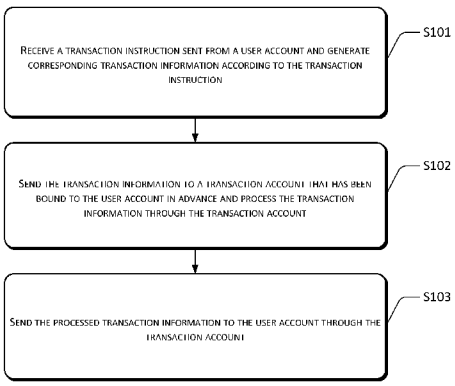

FIG. 1

(57) Abstract: A method and an apparatus of processing transaction information are disclosed. The method includes receiving a transaction instruction from a user account; generating corresponding transaction information according to the transaction instruction; sending the transaction information to a transaction account that is bound to the user account in advance; processing the transaction information through the transaction account; and sending the processed transaction information to the user account through the transaction account. By setting up a transaction account to bind with a user account, even though the user account is not capable of receiving transaction information in an international business scenario, the transaction information can be received by the user account through the transaction account, thus effectively solving a problem that certain user accounts cannot directly receive transaction information in an international business scenario and improving an efficiency of processing transaction information.
