

TITLE

FILTER CONNECTOR ARRANGEMENT HAVING A FERRITE
BARREL WITH A RECTANGULAR BORE

5

ABSTRACT OF THE INVENTION

10 A filter connector has a ferrite barrel with a rectangular bore
therethrough. The configuration of the bore closely matches the
substantially rectangular cross sectional configuration of an electrical
connector received within the bore. The connector has a pair of wings
upstanding from a base thereof. A single gate or a cooperating pair of gates
is(are) attached to one or both of the wings. When folded the gate(s) close
the bore through the barrel.
