

Abstract**Joint sealing profile, construction joint bridging device and
Method of manufacturing a joint sealing profile**

A construction joint bridging device 10 with a joint sealing profile 1 and a joint sealing profile 1 as such, as well as a method for producing a joint sealing profile 1 and a method for producing and disassembling a construction joint bridging device 10. The joint sealing profile 1 consisting at least partially of an elastic material and having a holding portion 2, 3 for fastening to the construction joint bridging device, wherein the holding portion 2, 3 has at least in sections a material composition 4 which can be activated in a targeted manner by chemical, thermal and/or physical exposure so that the volume of the holding portion 2, 3 changes.
